

>TryBash Cheat Sheet

File Navigation

<code>ls</code> Lists the contents of a directory	<code>ls -t</code> Sorts entries by time
<code>ls -a</code> Lists all contents, even hidden	<code>ls -1</code> Forces single column output
<code>ls -h</code> Lists contents in human-friendly units	<code>pwd</code> Shows the current working directory with full path
<code>ls -l</code> Displays permissions, links, owners, etc.	<code>cd</code> Changes directory, <code>cd ..</code> changes to parent directory. Alternatively, can enter full path, e.g. <code>cd /home/user1/Documents/</code>
<code>ls -m</code> Displays content in single line, separated by comma	<code>cd d + TAB key</code> TAB will auto-fill IF there is a unambiguous match
<code>ls -R</code> Lists content recursively, e.g. including content from directory	<code>cd /dir</code> Regardless of current working dir, user will change to /dir

File Manipulation

<code>mkdir dir1</code> Creates new directory	<code>mv origFile newLoc</code> Moves file to new location
<code>mkdir dir1 dir2</code> Creates directory, or several ones	<code>mv doc1 doc2 new</code> Moves multiple files to new location
<code>cp origFile newDes</code> Copies file to new destination	<code>mv -n doc1</code> Does not overwrite existing file
<code>cp doc1 doc2 new</code> Link mkdir, can copy many files at once to a destination	<code>rm -R</code> Deletes a directory
<code>cp -i origFile new</code> interactive mode, ensures no overwrite	<code>rm doc1</code> Deletes a file
<code>cp doc* dir</code> *wildcard copies all files that start with "doc" into dir	<code>rmdir dirName</code> Deletes an empty directory
<code>cp file *.jpg new</code> Copies all jpg's that start with file into new	<code>rm doc1 doc2</code> Deletes multiple files at once
<code>sort</code> Sorts input	<code>uniq</code> Filters out consecutive duplicated lines

Redirection & Pipelining

<code>cat file</code> Displays content of a file	<code>ls sort</code> Pipelining, first lists then sorts
<code>cat doc1 > doc2</code> Performs like a copy, using redirection operator	<code>ls /home -a sort uniq</code> All unique items in home dir
<code>cat doc1 >> doc2</code> Appends doc1 to end of doc2	<code>wc file1</code> Word, line, and byte count of file1
<code>ls -l /user/home > home.txt</code> Lists contents of home to home.txt	<code>wc -l file1</code> Returns lines in file1
<code>sort file1</code> Sorts the contents of file1 line-by-line	<code>grep</code> Processes text line-by-line and prints any matching patterns
<code>sort file1 > sorted</code> Sorted file1 content saved to sorted	<code>ls dir1 grep "zip"</code> Shows all zip files in our dir1 path
<code>uniq file1</code> Filters out duplicate lines from file1	<code>grep -c "Error" log.txt</code> returns number of "Error" in log.txt
<code>grep -i Error log</code> case insensitive search for "Error" in log	<code>ls -R /home grep "txt" less</code> Shows all text files in /home
<code>ls -a /home sort > homeDir.txt</code> Saves sorted list of /home into homeDir.txt	

Utility

<code>clear</code> Clears the console, same as <code>ctl-L</code>	<code>echo \$HOME</code> Displays contents of the home directory
<code>history</code> Shows complete list of previously executed commands	<code>head File1</code> Displays first ten lines of File1
<code>man ls</code> Show the documentation for a command	<code>tail File1</code> Displays last 10 lines of File1
